

Community workshop on standards and infrastructure for predicted effector gene lists

What: A community workshop to discuss standards, infrastructure, and incentives to promote sharing and interoperability of predicted effector gene (PEG) lists, hosted by the Knowledge Portal Network and the GWAS Catalog.

Why: Lists of the genes that are predicted to be effectors (causal genes) are a valuable outcome of GWAS, but the proliferation of multiple evidence types, methods, and presentation format carries the risk of confusion.

When: September 16-17, 2024 | 9am - 1pm EDT, 2-6pm BST on both days.

Where: In person at the Broad Institute, Cambridge MA USA; in person at the European Bioinformatics Institute, Hinxton, UK; or on Zoom

Program: to be announced

Confirmed speakers:

Noël Burt, Broad Institute
Adam Butterworth, University of Cambridge
Maria Costanzo, Broad Institute
Marina DiStefano, ClinGen
Eric Fauman, Pfizer Inc.
Jason Flannick, Boston Children's Hospital
Laura Harris, GWAS Catalog
Brent Richards, McGill University
Cassandra Spracklen, University of Massachusetts
Yakov Tsepilov, Open Targets

Details

September 16-17, 2024

9am - 1pm EDT; 2 - 6pm BST

- In person at the Broad Institute, Cambridge MA USA
- In person at the European Bioinformatics Institute, Hinxton UK
- On Zoom
